

LETTERS TO THE EDITOR

NAET®: Great for Allergies

NAET® Cleared my Urinary Tract Infection in Minutes!

Dear Editor,

In late January after a trip to northern California, I became quite ill. At first thought it seemed like influenza, but gradually it became apparent that this was a flaming urinary infection. I was passing blood, and white debris in the urine with severe burning sensations.

After a ten day course of antibiotics from my M.D., there was a definite improvement, but the urinary bladder was still burning like the fires of glades, plus an incessant urge to void. I was waking up at least ten times to void during the night.

Blood tests, PSA, etc, were negative. There were blood and leukocytes in the urine. So we concluded that there were stones passing. What saved the bacon was the **“Living Pain Free”** text book by Devi S. Nambudripad, I had purchased at the last NAET® seminar. I literally marked off each and every acupuncture point in the book that had any reference to kidney, bladder etc. Then began stimulating these points so much that I could tell where the points were by the marks on my anatomy. This was done at night, when the urge to void was driving me bananas and preventing sleep. It worked! Gradually things all calmed down. In

addition, this particular textbook has greatly enhanced my backache patients’ response. I purchased this textbook for the convenience of utilizing it on allergy patients. The benefits far exceeded my mightiest expectations.

Later I treated with NAET® bacteria mix, and bacteria mix plus my urine in combination. My urinary infection like symptom completely cleared up when I completed the NAET® treatments for bacteria and combinations. It hasn’t returned in three years.

(Proud NAET practitioner)

Her Shoulder Pain Was From Urinary Infection!

A 60 year old female NAET® and chiropractic patient of mine (Lynne) had come to see for sharp pains radiating into her left shoulder and arm. The pain had been gradually worsening over a period of weeks and now was reaching almost unbearable levels at times. Conventional chiropractic care and physical therapy gave her only brief remission from the daily pain and severe restrictions in her shoulder’s range of motion. A visit to an orthopedic doctor informed her that the pain was caused by two degenerated discs in Lynne’s neck and that a surgical replacement of the two discs was the only option. Full recovery could take up to a year. An

appointment for the surgery was made. During the course of an advanced NAET seminar I learned from Dr. Devi that an allergy to urine can bring on arthritic symptoms. Lynne was one of my first patients on the Monday after the seminar and my first words to her were, "Let's check your urine!"

Lynne's shoulder pain disappeared half way through the first NAET® session where a sample of her urine was used as the allergen.

After a few days of no symptoms Lynne started to experience the gradual resumption of her neck and shoulder symptoms, but at a much less intense level. The following allergens were then cleared on Lynne over the next 4 weeks:

Urine
Blood
Bacteria
Bacteria/urine Combo
Blood/urine combo
CSF
Blood/CSF combo
CSF/urine combo
CSF/Blood/Urine
CSF/Urine/Bacteria/Blood combo
Disc mix
Bone mix
Bone/blood combo
Bone/CSF combo

During the course of these treatments the symptoms diminished to zero and stayed there. Three months later Lynne experienced a brief flare up of symptoms which quickly responded to combinations of Urine, Hypothalamus, Blood and CSF. That was 8 months ago and Lynne's symptoms have not returned.

NAET is a very powerful tool and I am grateful every day that I learned it from Dr. Devi and am able to pass it along to all my patients.

Fever Due To Unknown Origin

With great satisfaction, I like to report to you that NAET® is getting very popular over here. I have about 150 patients to keep me busy and I am doing NAET® on all of them. These patients are young children with different levels of mental disability. I have many patients with Down syndrome. Parents are very happy with the NAET® treatments. Parents are so surprised that for many years they have treated their children for constant runny nose with various medication and got no positive results and now just with a couple of NAET® treatments their nose running is stopped completely. Children with down syndrome are always suffering from some infections or the other. Almost all our down syndrome children who have been having runny nose 365 days of the year do not have such problems now. They are responding very well to NAET® treatments.

Three patients with asthma got well completely by the time they finished the NAET® basics. One young female patient who was admitted in one of the leading hospitals here with fever for 1 1/2 months came to me because treatments in the hospital didn't help the child and she heard about NAET® from her friend. The hospital could not find any reason for her continuous fever. She got well after just two NAET® treatments. I treated her using our acute care protocol for her own urine and then for the virus mix. She and her family are very happy now. I also treated a lady for her hot flashes. She is free of her menopausal symptoms now. I have also treated all my students and staff at the center. They all are doing well. I have many patients on waiting list wanting to get treated with NAET®. We are anxiously waiting for January for you to come here and train more doctors in NAET®. Then we will be able to admit these waiting list patients. We thank you for sharing NAET® with us.

Loss Of Voice

After recently taking a trip to Puerto Rico, within just a few days I seemed to have come down with an extreme case of laryngitis, that lasted through the remainder of my trip. Other than having little, or no voice,

I felt pretty well. The only other problem that seemed to occur, was having a fair amount of stomachaches (which I had attributed to their local salsas and rum drinks!). I didn't feel sick, but did feel frustrated as I love to sing and not being able to hit notes or even talk with a decent voice left me very curious as to what was happening! Usually if I ever get any kind of throat affliction, all I need to do is gargle with goldenseal, and I am healed...but this didn't even help!

Two weeks later after arriving home, asthma also set in almost instantly upon entering the airport. Since asthma didn't seem to be a problem during my trip, I did not really relate it to losing my voice, but found out a couple of days later that it may have been a part of it after all.

I saw Dr. Marilyn Chernoff a couple of days later, and she tuned into the problem right away using NAET® acute care protocol- as being the result of ingesting chicken that had been bitten by a brown recluse spider! This sounding far-fetched to most people (I admit a little to myself). I still had total faith in her NAET® diagnosis as she has never been wrong with me yet! Amazingly, just after 20 minutes of the NAET® treatment, my voice returned about 80%, and three days later it returned 100%! (which made myself and the choir I sing with very happy indeed) Evidently, this particular spider affects the respiratory system. I'm just grateful I didn't have direct contact with it!

I think it is just incredible how Dr. Chernoff can tap into the exact culprit that causes "disease" with ones' system; and am also so thrilled to have finally found someone that can help me as much as she has. After seeing her now for over one and a half years, my asthma has improved about 70 percent; something that no other M.D., allergist, or acupuncturist has been able to do... These treatments have made me a devoted believer in NAET®!!

Thank-you! Thank-you!

My Child Doesn't Have Lupus Athritis Anymore!

I would like to express my sincere gratefulness and happiness to Dr. Devi Nambudripad for taking care of

our daughter Nithya Menon age 3 with ANA level 7.4H on 8/15/2001.

My daughter was in pain and unable to climb the staircase at home and walk. Her pediatrician wanted to refer her to a specialist of pediatric rheumatoid arthrology and a pediatric ophthalmology for treatment of Lupus.

When the pediatrician informed me that my 3 year old child may be a victim of Lupus, I couldn't think for a few seconds. Finally when I pulled together, I refused to believe it. I didn't say anything to our considerate pediatrician. She was only trying to help my child with what she knew. She had no concept of alternative medical approach. She had no idea that treatments like NAET existed outside the medical regimen. Last year when my mother-in-law suffered from a bleeding gastric ulcer for three months, when the gastroenterologist couldn't help her with all the medication she was taking, we consulted Dr. Devi. She detected an allergy to the rice she was eating on a daily basis and suspected the cause of her gastric bleeding. Soon after she completed the treatment for rice, she stopped bleeding. She hasn't had the problem ever since.

I immediately called Dr. Devi's office and made an appointment for my daughter (8/31/2001). She treated her for vitamin C first. The second treatment was for my daughter's venous blood, then third treatment was with a combination of vitamin C and blood. By the same evening she began walking again without pain. She did a few more basic treatments with combinations and told us to wait a month to repeat the lab work. We did blood work through the pediatrician's office on October 2, 2001 and the the doctor called to notify us that the ANA level had dropped to 1.6 H and the Rheumatoid factor was negative.

Copies of the laboratory reports dated 2/11/2000 showing her ANA as 2.3H, 6/27/2000 ANA as 3.4H, 8/15/2001 ANA as 7.4H, 10/5/2001 ANA showing 1.6H (after NAET treatments) are attached with this testimony as a proof of what we have stated above. With our utmost thanks.

Ravi & Sathi Menon, Irvine, CA

Periodontal Disease

I have previously written a letter about the wonderful effects of NAET and now wanted to send an-

other about the most recent discovery. On 4/15/96 I went for a regular check-up with my dentist. The hygienist took a "sample" from my gums and put it under a slide. To my horror, I had stuff I did not want to look at. I was advised that I had the beginnings of gum periodontal disease. Yuk! Here's the data:

Initial Exam 4/15/96

Selenomonas spp	too many to count
Amoeba	<u>13-24</u> on a screen
Actinobacillus	
Actinomycetemeomitans	<u>07-12</u> on a screen

*Note: underlined numbers indicate my count is on the high end.

I came in to your office for a treatment on 4/17/96. My hygienist agreed to do another slide exam to determine if the treatment had been effective. She was amazed!! She said no one improves that quickly when the counts are as high as mine were. Here's the data:

As of 4/25/96

Selenomonas spp	none
Amoeba	1-6 on a screen
Actinobacillus	
Actinomucetemeomitans	1-6 on a screen

I think the data says it all. The dentist's office staff was amazed. They are not typically open to alternative methods of treatment. They called me and asked for Dr. Trott's number. My hygienist even suggested that I get another treatment from Dr. Trott and come back for another test to see if there was even further improvement.
